Accelerating PC Performance

Spectra 400 MHz

Processor UPGRADE

Product Highlights

- Upgrades 75, 90, 100, 120, 133, 150, 166, 200 & 233 MHz Pentium PCs to 400 MHz
- Supports Socket 5, Socket 7, Super7™, Cyrix and AMD based systems
- Provides up to 6x overall system increase in Windows® applications
- Powered by AMD-K6-2 processor with 3DNow! instructions
- Supports Windows 98, Windows 95, Windows NT®, Windows 3.x & DOS
- Software reinstallation not required
- Includes illustrated guide for easy installation
- Lifetime warranty

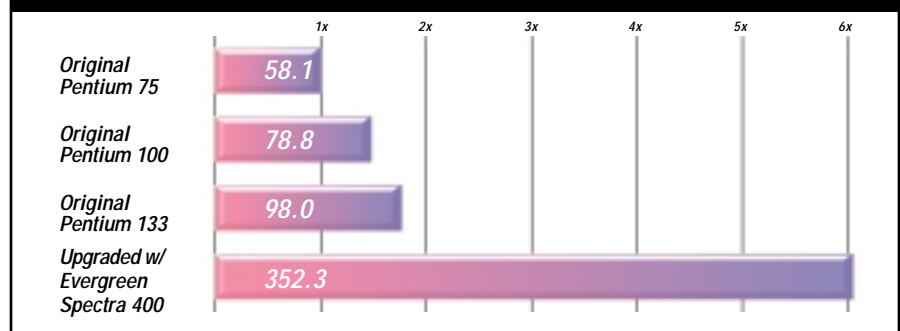

Evergreen Spectra 400 Processor Upgrade

The Evergreen *Spectra*™ 400 is a high-performance subsystem upgrade for 75 MHz and higher speed Pentium® processor-based PCs. Based on the AMD®-K6®-2 processor, this innovative upgrade allows users to migrate to 400 MHz and run 3DNow!™ instructions for faster imaging, smoother video playback & enhanced gameplay.

The Spectra 400 can increase a PC's performance up to 6 times that of the original system and features superior 3D performance, life-like images, graphics, sound, and an enhanced Internet experience. The Spectra 400 delivers the power and performance needed for today's most demanding software and carries a lifetime warranty.

Intel® Media Benchmark

Based on overall score of Intel Media Benchmark. Test system configuration: Pentium 75, Intel Advanced/ZP (Zappa) System board, 430FX chipset, AMI BIOS version 1.00.00.BSOT, MRBIOS version 3.45, 32MB 60ns 72-pin EDO SIMM, Western Digital Caviar AC11200L 1.18GB IDE hard disk, S3 Trio64 PowerGraph 64 PCI 2MB VGA card, onboard 256K L2 cache, Windows 98 version 4.10.1998, DirectX 6.
